

## NORFOLK ISLAND CLOSER TO 2024 100% RENEWABLE

If you pass the powerhouse and cannot hear a generator, the silence is because the Tesla battery is providing 100% of the island's current electricity requirements.

When the charge in the battery drops below predetermined levels the generator will kick in to ensure the power supply through the evening. The battery system is in its final testing and commissioning phase.

A big shout out to the Norfolk Island Electrical team and the contractors who commissioned the battery. Thank you to those members of the community who understand that an undertaking of this magnitude comes with some inconvenience.
